## Barks and Rec CARE & MAINTENANCE

### **Maintenance & Care:**

Maintenance reviews should be carried out in a systematic manner by trained personnel familiar with the park

area, such as maintenance workers, property staff, etc. Any damaged or worn parts, or any other hazards identified during a review must be repaired or replaced before allowing use of the equipment.

The frequency of maintenance will be determined by several factors, such as the frequency of use, age of equipment, the surrounding area, and frequency and severity of inclement weather.

Maintaining your equipment as well as its surrounding area is essential to minimizing the risk of injury to users, as well as maximizing your park's useful lifespan. We recommend the following maintenance procedures be followed.

### **On a daily basis:**

A responsible individual should conduct a brief visual check for structural defects, signs of vandalism, and litter or foreign matter that needs to be removed.

### **On a weekly basis:**

A responsible individual should complete a checklist of your own design. Any required repairs should be detailed on the separate maintenance report.

Once the repairs are completed, file the signed checklist and the record for future reference. A dated file and form should be kept for each piece of equipment at each location.
