GROSFILLEX FURNITURE CARE & CLEANING

How can I clean Grosfillex commercial resin furniture?

- Usually a mild detergent such as dish soap and water will clean the furniture.
- A 10% solution of either bleach or vinegar can remove more persistent stains.
- Chairs and chaises without metal parts have been successfully cleaned by soaking them in pool water and wiping them clean.
- General non-abrasive household cleaners (i.e. 409, Fantastik, Windex, WD-40) can help for various stains.
- While solvents are generally not recommended, careful application of mineral spirits, rubbing alcohol or acetone on sticky, glue-like or black stains, and immediately rinsed off, will work.
- Stubborn stains from different origins, such as sap, bird droppings, carbon monoxide and imbedded dirt can be best cleaned with resin furniture cleaners like SunBrite.
- Like for textile home furnishings, every case is different and may require professional attention depending on the nature of the staining agent.
- IMPORTANT: The use of bleach or chlorine based chemical sanitizer to clean molded melamine tabletops is NOT recommended: bleach will attack the surface overlay of the melamine tabletop and cause severe discoloration and staining. Household cleaners like Spic and Span or a mild detergent with water should be used to clean the tabletop surfaces.

How can I clean Grosfillex umbrella and cushion fabric?

- Grosfillex commercial grade outdoor fabric when tested for fade resistance in compliance with ASTM G 53.96 standard, provide twice the recommended performance of the American Casual furniture Fabrics Association (ACFFA).
- Grosfillex commercial outdoor fabrics are naturally stain resistant fabrics. To maintain beauty and ensure long life, wipe up spills as quickly as possible with an absorbent cloth.
- Clean regularly with a mild soapy solution and like warm water, rinsing thoroughly with clear water to remove all soap and allowing to air dry.
- The fabrics do not promote the growth of molds or mildew. However, dirt or standing water will support these organisms.
- Chlorine bleach can be used without affecting fabric color or strength and will kill mildew organisms.
- Do not use pine oil cleaners.

Krystal Chair Maintenance

ONLY CLEAN THE CHAIR WITH A DRY CLOTH OR SOAPY WATER.
